

It's like a bullet train for packaging data.

Engineering and operations teams at manufacturing companies spend 50% of their time looking for, organizing, and sharing product data. It's clunky, repetitive work that nobody likes, and it makes sharing technical data error-prone, costly, and slow. It's time to **introduce your teams to Anark Workstation**, the desktop application designed for creating technical data packages (TDP), **so everyone can innovate faster.**

3 Ways Anark Workstation Speeds Innovation

Anark.com/workstation

Sharing Data Today is Repetitive, Confusing, and Slow

For most manufacturers, the process of data sharing and communication looks like this:

Step 1: TDP Authors Waste Time on Manual, Repetitive Work

Step 2: TDP Authors Struggle to Make Data Easier to Consume

Step 3: Users Receive the Files and Struggle to Understand

TDP authors face the same questions and repeat the same tasks every time they need to share data.

- How should I package data?
- How should I explain it?
- For how many audiences?
- What software programs?
- Have I got everything?
- Am I sure?

Trying to make data easy to consume requires a lot of work and the creation of multiple files, often duplicating work.

Users try to make sense of it all. Q&A with TDP authors creates even more files and isn't centrally tracked.

Anark Workstation Delivers Key Business Improvements

Problems

- Costly scrap and rework
- High manufacturing costs
- Supplier collaboration suffers
- Time lost to repetitive work

Improvements with Anark Workstation TDPs

- Scrap rate reduced to near 0%
- 30% savings on part fabrication costs
- Supplier interaction time reduced 90%
- 50% of time regained

Add Ease, Clarity, and Speed with Anark Workstation

The process is improved when engineers and other TDP authors use the translation, recipe, and TDP template features of Anark Workstation. Additionally, Anark Collaborate is a fully-featured modern collaboration platform that allows for centralized content management and traceability.

Step 1: Translation Recipes Deliver the Right Data Every Time

Step 2: TDP Templates Package Data in Clear, Consistent Layouts

Step 3: TDPs are Managed Centrally for Any User on Any Device
